Symposium Committees

Introduction

Session 1. Novel Laser Sources

1015902	Development of laser technology in Poland - 2016
1015903	Fifth generation light sources
1015904	Investigative study of a diode-pumped continuous-wave Tm:YAP laser as an efficient 1.94 μm pump source
1015905	Pulse laser head with monolithic thermally bonded microchip operating at 1.5 μm wavelength
1015906	Thulium fiber laser for the use in low-invasive endoscopic and robotic surgery of soft biological tissues
1015907	Bound soliton state in all-polarization maintaining fiber laser mode-locked by graphene
1015908	Designing of TJ VCSEL based on nitride materials
1015909	Low temperature plasmas created by photoionization of gases with intense radiation pulses from laser-produced plasma sources

Session 2. Biomedical Applications of Lasers

1015909A	Laser micro-structuring of surfaces for applications in materials and biomedical science
1015909B	Spectroscopic Properties of Second Generation Photosensitizers for Photodiagnosics and Photodynamic Therapy
1015909C	Light sources currently used in photochemotherapy
1015909D	Characterization of microsieves recovery efficiency in isolation of circulating tumor cells
1015909E	The selection of light emitting diode irradiation parameters for stimulation of human mesenchymal stem cells proliferation
1015909F	Autofluorescence of human cells in vitro as a biomarker of their metabolic activity
1015909G	The laser detector of bio-aerosols
1015909H	Introductory investigations of dermatologic diode laser with wavelengths 975 nm: clinical therapy of Recklinghausen disease and of hemangiomas
1015909I	Semiconductor lasers vs LEDs in diagnostic and therapeutic medicine /pending!!!/
1015909J	Laser-induced periodic surface structures on pyrolytic carbon prosthetic heart valve

Session 3. Laser Technology and Metallurgy

1015909K	The structure and properties of filler metal-free laser beam welded joints in steel S700MC subjected to TMCP
1015909L	The causes of high power diode laser brazed seams fractures of dissimilar materials
1015909M	The influence of surface preparation on the absorption coefficient of laser radiation
1015909N	Diode laser cladding of Co-based composite coatings reinforced by spherical WC particles
1015909O	Modeling of remelting processes of metal targets using pulses of continuous laser with pre-impulses
1015909P	Research on quasi-cw and pulse interaction of strong laser radiation with the military technical materials
1015909Q	Parametric studies on the nanosecond laser micromachining of the materials
1015909R	Influence of laser power on the penetration depth and geometry of scanning tracks in selective laser melting
1015909S	The process development of laser surface modification of commercially pure titanium (Grade 2) with rhenium
1015909T	The laser welding of iridium-platinum tips to spark plug electrodes
1015909U	Mechanically assisted laser forming of thin beams
1015909V	Raman study of TiO ₂ coatings modified by UV pulsed laser

Session 4. Lasers in Measurements

1015909W	Soft X-ray microscope with nanometer spatial resolution and its applications
1015909X	Application of cascade lasers to detection of trace gaseous atmospheric pollutants
1015909Y	Optoelectronic methods in potential application in monitoring of environmental conditions
1015909Z	Stand-off detection of alcohol vapours in moving cars
1015910	Laser data transmission with the application of reflectance modulator
1015911	Free space optical communication based on pulsed lasers
1015912	The PSDAVLL signal detection with synchronous ferroelectric liquid crystal switching as a laser frequency stabilization method
1015913	Multiphoton, optical fiber-based fluorescence spectroscopy
1015914	Measurement of vehicles speed with full waveform lidar
1015915	Optical methods for measurements of surface shape in optical components for high power laser beam forming
1015916	Investigations of high power laser beam interaction with material by means of hybrid FVM-FEM and Digital Image Correlation methods
